

Offering leading edge alternatives to patient care

MORE THAN 19 years ago, Rehab Plus opened its doors in a small unit in Savannah Plaza. It was the first medical/home health care facility on the island with a store front that allowed people to see different designs of wheelchairs, bathroom safety products, braces and post-operative products. History in the making is always an exciting time for a company, but it was also a daunting task to figure out how best to serve the needs of the people of Jamaica. It soon became evident that offering rehabilitative aids alone was not enough.

Individuals who had an injury or disability, persons who wanted to prevent or lessen the risk of injury, children who had correctable deformities such as club foot and pigeon toes, and those who simply wanted to improve their physical health status needed to be satisfied. Also those who were physically challenged due to cerebral palsy, trauma, stroke, etc., had special lifestyle needs. To that end, the product line grew rapidly, and so did the skills and awareness of the personnel as it became evident that in order to embark on such a journey, training in all areas was mandatory.

Intensive overseas and local training, along with a wide knowledge base, have been the hallmarks of this small giant in the health care industry. Our qualified staff can offer doctors, physiotherapists and other health professionals, leading edge alternatives to patient care. Many products are available at Rehab Plus ranging from footwear, and various braces to compression hosiery and garments, and products for surgery. However, it is for its services that Rehab Plus is best known. Skills honed over almost two decades form the basis of these services which include:

- Evaluating for, and supplying assistive and adaptive equipment for special needs patients.
- Providing specialised mobility and accessibility aids.
- Care of diabetic feet.
- Comprehensive pedorthic care (management of problems of the feet).

Specialised wheelchair for a child.

- Bracing for Scoliosis (an S-shaped curve of the spine).
- Manufacturing of foot orthotics (supports).
- Fitting and modifying all types of braces.

Our professional and technically competent staff continues to help customers choose the best products for their health care and lifestyle needs.

Today, almost 20 years later, Rehab Plus is located in the Trade Centre, on Red Hills Road. It remains a small company, but is huge on impact, commitment, customer orientation, and good old-fashioned warmth and courtesy.
